Virat Singh Pundir

viratsinghpundir123@gmail.com | +91 9587701979 | LinkedIn

Professional Summary

Motivated and detail-oriented Software Engineer with a solid foundation in programming, problem-solving, and modern development practices. Enthusiastic about building efficient, scalable, and user-centric solutions. Currently seeking an internship opportunity to gain firsthand experience working on real-world corporate projects that impact a large user base. Eager to apply technical skills, learn from industry professionals, and contribute effectively to innovative development teams.

Education

B. Tech in Computer Science and Engineering
SRM Institute of Science and Technology, Ramapuram 2022-2026

• Relevant Coursework: Data Structures, Algorithms, Database Systems, Machine Learning, Artificial Intelligence

Higher Secondary Education (CBSE - PCM)
Children's Academy Convent School 2020--2021

• Completed 12th grade with a focus on Computer Science and Mathematics

Projects

Speech-to-Text Recognition System Jun 2025

- Developed an AI-based speech recognition system using Generative AI techniques for accurate transcription.
- Implemented advanced audio preprocessing, noise reduction, and feature extraction pipelines.
- Trained and fine-tuned models on diverse datasets to improve real-world performance and accuracy.
- Integrated continuous learning approaches to stay aligned with latest advancements in speech AI.

Sentiment Analysis for Marketing May 2025

- Built an NLP-based sentiment analysis system to classify customer feedback into positive, negative, and neutral categories.
- Applied techniques such as TF-IDF, word embeddings, and trained models including Logistic Regression, SVM, and BERT.
- Visualized sentiment trends to extract actionable business insights from unstructured data. data-driven decision making for improved marketing and brand strategy.

Multimodal Medical Diagnosis System Sep 2025 – Oct 2025

- Developed a multimodal AI system that combines chest X-ray image analysis with clinical text processing using BERT.
- Integrated LLM-based automated report generation for clinician-friendly diagnostic insights.
- Achieved high model accuracy using transfer learning, hyperparameter tuning, and rigorous evaluation.
- Built RESTful APIs for seamless integration with healthcare systems.

Technical Skills

- **Programming Languages**: Python, Java, C
- **Core Concepts**: Data Structures & Algorithms (DSA), Object-Oriented Programming
- **Technologies**: Artificial Intelligence, Machine Learning, Natural Language Processing, Generative AI
- **Libraries/Tools**: NumPy, Pandas, Scikit-learn.
- **Other Skills:** Problem Solving, Analytical Thinking, and aptitude.
