

Internship Experience

Software Development Intern @ LeverageAxiom (Apr 2026 @ Till now)

2020 @ 2021

- â€¢ Assisted in developing and testing web and application-based solutions using modern development practices.
- â€¢ Reviewed newly developed applications to identify bugs, UI inconsistencies, and functional issues before deployment.
- â€¢ Performed application testing, debugging, and quality assurance to ensure smooth user experience and proper functionality.
- â€¢ Collaborated with development teams to report issues, suggest improvements, and validate feature performance.
- â€¢ Gained hands-on experience in software development lifecycle, app validation, and real-world project workflows.

Projects

Speech-to-Text Recognition System (Jun 2025)

- â€¢ Developed an AI-based speech recognition system using Generative AI techniques for accurate transcription.
- â€¢ Implemented advanced audio preprocessing, noise reduction, and feature extraction pipelines.
- â€¢ Trained and fine-tuned models on diverse datasets to improve real-world performance and accuracy.
- â€¢ Integrated continuous learning approaches to stay aligned with latest advancements in speech AI.

Sentiment Analysis for Marketing (May 2025)

- â€¢ Built an NLP-based sentiment analysis system to classify customer feedback into positive, negative, and neutral categories.
- â€¢ Applied TF-IDF, word embeddings, Logistic Regression, SVM, and BERT models.
- â€¢ Visualized sentiment trends to extract actionable business insights from unstructured data.

Multimodal Medical Diagnosis System (Sep 2025 @ Oct 2025)

- â€¢ Developed a multimodal AI system combining chest X-ray image analysis with clinical text processing using BERT.
- â€¢ Integrated LLM-based automated report generation for clinician-friendly diagnostic insights.
- â€¢ Achieved high model accuracy using transfer learning and hyperparameter tuning.
- â€¢ Built RESTful APIs for healthcare system integration.

LegalScan @ AI-Powered Legal Document Analyzer (Jan 2026 @ Feb 2026)

- â€¢ Developed an AI-based legal document analysis system to extract, summarize, and classify legal information from contracts and legal documents.
- â€¢ Implemented OCR and NLP techniques for processing scanned PDF documents and identifying key clauses and risks.
- â€¢ Integrated transformer-based models for legal text understanding and automated document summarization.
- â€¢ Built a user-friendly interface for generating structured legal insights in real time.

RAG-Based AI Chatbot System (Mar 2026 @ Apr 2026)

- â€¢ Built an intelligent chatbot using Retrieval-Augmented Generation (RAG) architecture for context-aware question answering.
- â€¢ Implemented document ingestion, text chunking, vector embeddings, and semantic search using FAISS/ChromaDB.
- â€¢ Integrated Large Language Models (LLMs) with retrieval pipelines to generate accurate responses from custom data sets.
- â€¢ Developed REST APIs and an interactive UI for real-time conversational interaction with uploaded documents.

Technical Skills

- â€¢ Programming Languages: Python, Java, C
- â€¢ Core Concepts: Data Structures & Algorithms (DSA), Object-Oriented Programming
- â€¢ Technologies: Artificial Intelligence, Machine Learning, NLP, Generative AI, RAG
- â€¢ Libraries/Tools: NumPy, Pandas, Scikit-learn, LangChain, FAISS, ChromaDB, Streamlit
